

## GOT FLATS?

Maximizer Series tires are guaranteed flat proof! Yet, they offer a soft and pleasant ride. A computer designed array of two rows of deep cushioning holes in the sidewall optimizes flexibility while the tough, tear resistant rubber compound can handle the most severe job conditions. No more downtime due to tire punctures, or operator fatigue due to rough solid tires. Welcome to the flat-free air-cushioned world of Maximizer!

series

## Flat-Proof Tires

### • Flat-Proof

Eliminate downtime from flat tires once and for all! Get more work done on time without annoying interruptions for tire repairs and costly delays.

### • Air Cushioned

Maximizer tires provide an air-cushioned ride, resulting in reduced operator fatigue and less stress for the machine. Unlike foam-filled, solid or tires with a single row of sidewall holes, Maximizer tires feature a double line of extra deep cushioning holes for the optimal shock absorption. Don't be fooled by tires with fewer or shallower sidewall holes, since you may be paying for a visual effect with very minimum cushioning properties.

### • Durable

Maximizer tires are as durable as solid tires and will take you through the worst surface conditions. The sidewalls are highly elastic while the tread surface is composed of tough, tear resistant rubber. Special compound additives prevent premature aging and cracking. Maximizer tires are built to outlast most pneumatic tires by 3 to 4 times.

### • Deep Tread

Maximizer tires have a 180% deeper tread than the standard pneumatic tire and a directional lug pattern for improved traction, stability, and longevity.

### • Sizes Available

Maximizer tires are available in various sizes and bolt lug patterns to fit a wide range of equipment makes and models.

### • High Load Capacity

Up to 30% greater load capacity! That's what you get when you combine the best rubber compounds, semi-pneumatic technology and a heavy duty steel rim.

### • Offset Rims

Maximizer tires come with offset rims to allow you to alternate tires and change the total width of your machine. This comes in handy when you need extra stability or you need to operate in tight spaces.

### • Rimless Option

If you already have your compatible solid tire rims, you can save money by ordering your next set of Maximizer tires without rims.

### • Easy to Install

Maximizer tires are already rim mounted & easy to install. No foam filling or other "work-arounds" here. Just bolt them on and you are ready to go.

### • Attachment Friendly

There are many attachments out there, and some of them are a nightmare for tires. But with Maximizer tires you are trouble-free. Like all Maximizer products, the tires are designed to work with most attachments in the industry.

### • OTT Friendly

Maximizer tires are designed to work with Maximizer over-the-tire tracks. Combine Maximizer tires with Maximizer OTT and you will get a flat proof skid-steer loader with superior traction and floatation capabilities!
